## Fleming Announces Trio-E Exceeds New Strict Building Code Requirements

Woodbridge, ON – December 14th, 2011 – Fleming is pleased to announce that Trio-E meets and exceeds the requirements to the new energy efficiency supplement, SB-10, to the Ontario Building Code.

The prescriptive requirements of SB-10 state that exterior opaque swinging doors are required to have a U-value not exceeding 0.4. This new requirement will go into effect January, 1<sup>st</sup> 2012. Trio-E from Fleming Door Products is the only steel stiffened door on the market today that exceeds compliance with the new SB-10 supplement.

The Trio-E door is steel stiffened for strength, but has achieved an operable U Factor of 0.29 which is 50% better than other steel stiffened doors currently available on the market today (The lower the U factor the better the insulation). Building owners spend millions of dollars a year on energy bills and the Trio-E represents a chance for them to realize significant savings on a new or retrofit project.
